① Protect the core

- Understand the business & Domain
- Build only core facts & dimensions.
- A separate model for special cases.
- Protect the core data model.

WATCH OUT

Without Saying NO, adding unnecessary tables, you risk breaking your model.

- wasted space
- slower performance
- confused reports

PHASE-IV [Polishing the Model]

- The Standards. of our data modeling project
- Connect dim-date. almost every fact needs a date.
- The Measures. the obvious ones every model needs
- Secure the Model. apply row-level security
- Checking the Big Numbers. The ones you already know

Hand it Over. Give them the guide, let them run it.

WATCH OUT

Don't secure everything. Forcing it onto every fact breaks the grain.
Secure only what the requirements need.

January 2025

Mon	Tue	Wed	Thu	Fri	Sat	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Sun
		1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19
20	21	22	23	24	25	26	27	28	29	30	31									

What is more important, your standard of living or living a life with correct standards.

PHASE-III [Building Facts]

PHASE 2

→ A fact table always sits at the level of what you measure

So ask: Where do the numbers come from?

Headers → Dim-table

- **Junk Dimension** - A small dimension that bundles several unrelated low-level flags.

⇒ One column, one place
reduce the noise from the source system

- It's not about the data type

A Dimension is context.
An Event is the event.

A fact is the event...
describes the other - g

A fact is the each
Cone describes, the other grows

- Factless Fact (a fact without measures (numbers))

February 2025

Mon	Tue	Wed	Thu	Fri	Sat	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Sun
					1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
17	18	19	20	21	22	23	24	25	26	27	28									

A pessimist sees the difficulty in every opportunity; an optimist sees the opportunity in every difficulty.

PHASE-I [Prepare & Explore]

Get a feel for Data, not every detail

- like - What's the business?
- What are the entities?
 - Which are dimensions?
 - Which are facts?

⇒ Understand the data before you change anything

- Creating Groups like Grouping every raw material into a folder, creating a folder for dim., ~~fact~~ facts, support.

Everyone do this in their own way to Organize the Power Query Editor

PHASE-II [Dimensions]

The dimension loop
the same three moves, for every dimension

- 1) Collect the tables for one entity
(every table that describes it • group them together)
- 2) Combine them into one dimension
(split • merge • append • fix • drop) until we get a shape
- 3) Clean it to the standards.

January 2025

Mon	Tue	Wed	Thu	Fri	Sat	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Sun
		1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19
20	21	22	23	24	25	26	27	28	29	30	31									

⑥ Rule 1

Build A Star Schema

A fact in the middle, dimensions around it

⑥ Rule 2

Understand before you change
always read the gain first

⑥ Rule 3

Every column earns its place
if it doesn't help the report, drop it

⑥ Rule 4

Protect the numbers

know your totals, re-check after every change.

STANDARDS

Language [one language everywhere: English]

Naming [all lowercase with _]

Tables [fact - for fact table, dim - for dimension table]

Keys [-key = we make it; -id = from the source]

Friendly Names [readable names, not cryptic codes]

Capitalization [Capitalize each word in all text values]

February 2025

Mon	Tue	Wed	Thu	Fri	Sat	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Sun
					1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
17	18	19	20	21	22	23	24	25	26	27	28									

Every person you meet has a lesson to teach. Let your spirit be open to life's hidden messages.

① Data Modelling Project With Baraa Y

* Step 1 | Prepare & Explore

open the mess & understand the data

This step includes

- # Open the messy model
- # Prepare the workspace
- # Understand the business
- # Understand the data
- # Spot dimensions vs facts.

* Step 2

Dimensions

build them clean, one by one

includes

- # Group the tables for one entity
- # Reshape into one clean dimension
- # Clean it to the standards
- # Repeat for every dimension

* Step 3

Facts

build, connect & test the numbers

includes

- # Pick an event, read its grain
- # Build ~~the~~ the fact from the details
- # Connect every dimension
- # Test so the numbers never break

* Step 4

Polish

secure it & validate the model

- # Re-check the standards
- # Add the date dimension
- # Build the measures
- # Add RLS
- # Final Validation
